

## CYBERGHOST UTILISES THE EXPERTISE OF FREEDOMTECH SOLUTIONS

### BUSINESS CHALLENGE

CyberGhost a leading worldwide VPN provider needed to overcome their privacy and utilisation concerns, as well as enhance the transparency, security and ownership of their infrastructure. Freedomtech helped CyberGhost migrate from a multiple disperse vendor cloud environment to a customer owned infrastructure, housed in 21 data centres in multiple cities across the world.

### SOLUTION

After designing the solution, Freedomtech Solutions acquired the power and footprint in multiple data centres. Freedomtech preconfigured the hardware, in freedomtech lab environment, with the necessary operating system, IP subnets, security and then globally shipped these servers to each data center to be installed into the racks. Within each data centre, Freedomtech Solutions uses multiple 10Gbps ports with a total capacity of 40 Gbps per site to provide connectivity for the solution. Freedomtech Solutions also has lower bandwidth management ports at each location, enabling Freedomtech technical staff to manage the entire system on behalf of CyberGhost .

### RESULT

CyberGhost has one invoice and one number to call for 24/7 support and project management. The rollout of 21 sites was deployed within a record breaking 3 months, within budget and significantly ahead of schedule.
