

INNOVATION CENTER

INNOVATION REQUIRES AN EXPERIMENTS MINDSET

Freedomtech has developed an Innovation Centre and a multi purpose resource facility based in North England, UK.

Whether you are looking for hardware, software or a total solution, Freedomtech has developed a 'live' laboratory environment that enables businesses to evaluate a combination of best-of-breed solutions from leading vendors including nextgeneration technologies such as HCI, IoT, analytics, AI, cloud and hybrid cloud.

Proof of concept's (POC) can help provide solutions to new problems and verification of integrated technologies without the need to outlay large initial capital expenditure in the hope something works.

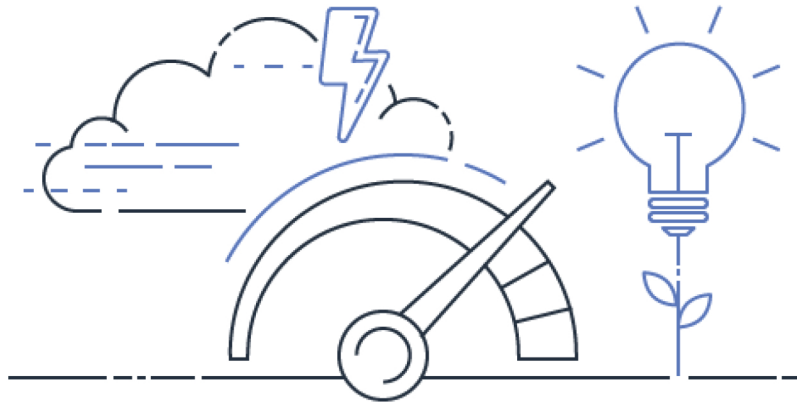

POC's can confirm functionality with existing systems. Freedomtech will provide you with a vendor-agnostic dedicated lab environment to test and provide validation of how your IT systems will positively affect your organisation's business objectives.

With our extensive capability and deep domain knowledge, we can also help you to design and deliver end to end solutions from pre-sales support through to infrastructure optimisation and life-cycle management.

The Innovation Centre is also accessible remotely and or webinars can be arranged for customers who are unable to access our location.

INNOVATION CENTER

DEMONSTRATION WORKSHOPS

Technology workshops are for businesses to bring their teams (or access the technology remotely) and see live demonstrations on a single technology, several technologies together, or a live solution demonstration.

PROOF OF TECHNOLOGY

The ability to deliver proof of technology and concepts to business stakeholders and their technology team is a valuable tool to learn and understand how specific technology can deliver better outcomes. These sessions are designed as a proof point that the solution under consideration will work in new or existing environments.

TEAM ENABLEMENT

This is an ideal way to train multiple team members on new vendor technologies and solutions and to provide knowledge transfer; enabling all stakeholders and their technology teams to evaluate and consider new technologies together.

TECHNOLOGY BRIEFINGS

These sessions are designed as end-user exploratory workshops and give businesses the ability to experience a number of technologies and to evaluate the benefits of each, also to look at different technologies working alongside each other. Our skilled consultants are on-hand to demonstrate the solutions, answer any questions.

INNOVATION CENTER - TECHNICAL COMMUNITY

CONSULTATIVE ENGAGEMENTS

Freedomtech has a team of highly Skilled Consultants widely available to help our customers follow our trusted advisor strategy. These sessions are designed as a technical deep dive into a chosen technology or solution.

SEMINARS AND EVENTS

The Innovation Centre offers our customer not just the chance to see technology in action in the technology lab but to share their findings with their customers and stakeholders.

TRUSTED ADVISOR

Our advanced solutions technical community is an overlay technical sales and support team. It enables our specialist business units to fulfil the key goals of a trusted advisor to fully support our customers business objectives. Formed of technical presales, solution design, professional services and training divisions, its primary purpose is to drive better business outcomes for our customers.

- Trusted Technology Partner
- Increase business profitability
- Reducing costs
- Improve customer satisfaction
